DETAILED ACTION

Applicant's response filed September 27, 2003 have been considered and found persuasive. Therefore, the rejection under 35 USC 13(a) is withdrawn.

Claims 1-47 are pending. As stated in the previous office action mailed November 19, 2002, claims 15-16 and 20-47 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 2, 4, 10-14, and 17-19 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the lipoxxygenase inhibitors listed in claims 3 and 9, does not reasonably provide enablement for other suitable lipoxxygenase inhibitors. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims. In the instant case, the specification fails to provide information that would allow the skilled artisan to practice the instant invention without undue experimentation. Attention is directed to *In re Wands*, 8 USPQ2d 1400 (CAFC 1988) at 1404 where the court set forth the eight factors to consider when assessing if a disclosure would have required undue

experimentation. Citing *Ex parte Forman*, 230 USPQ 546 (BdApls 1986) at 547 the court recited eight factors:

- 1) the quantity of experimentation necessary,
- 2) the amount of direction or guidance provided,
- 3) the presence of absence of working examples,
- 4) the nature of the invention,
- 5) the state of the prior art,
- 6) the relative skill of those in the art
- 7) the predictability of the art, and
- 8) the breadth of the claims.

Applicant fails to set forth the criteria that define a "lipoxygenase inhibitor".

Additionally, Applicant fails to provide information allowing the skilled artisan to ascertain these compounds without undue experimentation. In the instant case, only a limited number of "lipoxygenase inhibitor" examples are set forth, thereby failing to provide sufficient working examples. It is noted that these examples are neither exhaustive, nor define the class of compounds required. Please note that there are no common structural similarities among the compounds recited. The only common property of these compounds is their ability to inhibit lipoxygenase. It is not known to what degree of inhibition a lipoxygenase inhibitor compound has in order to be useful in the instant invention. The pharmaceutical art requires each embodiment to be individually assessed for physiological activity. The instant claims read on all "lipoxygenase inhibitor(s)", necessitating an exhaustive search for the embodiments

suitable to practice the claimed invention. Applicants fail to provide information sufficient to practice the claimed invention, absent undue experimentation.

Allowable Subject Matter

Claims 3 and 5-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
